

# Trip speed and distance by gender

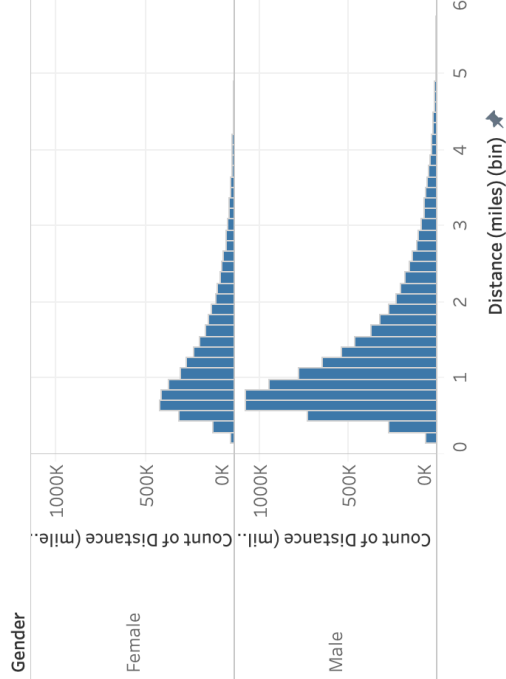

Avg speed and distance by rider age and gender

Trip speed distribution by gender

Trip distance distribution by gender

## Citi Bike NYC - Speed and distance by gender

This dashboard looks for difference in average trip distance or speed depending on the gender or age of the rider. The distribution of speed and distance shows males tend to skew a bit faster and farther than females.

Average distance begins to decline for females around age 33 and for males around age 40. Average speed for females follows a similar pattern by age. Average speed for males remains relatively unchanged until quite a bit older ages.
